TECNICAL SKILLS

Chemistry

- Analytical - Titration, Gravimetric Analysis, Spectrophotometry (UV-Vis, IR, MS, AAS), Chromatography (HPLC, GC, TLC)
- Organic/Inorganic - Purification, FTIR, NMR/IR

Computer Science

- Languages - Python, Java, PHP, SQL
- Web/Mobile Development - HTML, CSS, Android Studio, ReactJS
- Database - MySQL, SQLite

SOFT SKILLS

- Leadership
- Teamwork
- Critical Thinking
- Management Skills
- Problem Solving

SPORTS

- Chess
- Volleyball
- Cricket
- Badminton

LANGUAGE

- English
- Sinhala
- Tamil

ABOUT ME

I am recent graduate with a B.Sc. in Applied Sciences from Rajarata University of Sri Lanka. Possesses a good academic background combined with hands-on experience gained through researches and projects. Innovative **chemistry and computer science** professional with a unique ability to bridge laboratory precision and computational problem-solving. Passionate about leveraging analytical chemistry techniques (spectroscopy, chromatography) alongside advanced programming skills (Python, SQL, machine learning) to address complex scientific challenges. A natural leader and team player, I thrive in dynamic environments where adaptability, clear communication, and ethical decision-making drive success. Committed to continuous learning and professional development.

EDUCATION

Rajarata University of Sri Lanka 2022 Apr - 2025 May
Chemistry and Computer Science

- Successfully completed B.Sc. Applied Sciences [General] major in Chemistry/Computer Science

Dharmaraja College Kandy 2014 Jun - 2017 Dec

- General Certification of Education Advanced Level

Am / Lahugala M.V. 2003 Jan - 2013 Dec

- General Certification of Education Ordinary Level

RESEARCH EXPERIENCE

Unveiling Microplastic Pollution in Tilapia: Insights from Mahakanadarawa Lake, Sri Lanka

- Studied microplastic contamination in Nile Tilapia (*Oreochromis niloticus*) from Sri Lanka's Mahakanadarawa Lake, assessing pollution levels in fish, water, and sediment. Explored ecological and human health risks from agricultural runoff and domestic waste, providing critical baseline data for understudied freshwater ecosystems and sustainable management strategies.

Machine Learning-based Quality Detection of Cinnamon from Outer Bark Images

- Developed a deep learning model (U-Net and ResNet101) to automate quality grading of Sri Lankan cinnamon bark, addressing inconsistencies in manual methods. Achieved 92% accuracy through image segmentation and classification, integrated into a mobile app for real-time farmer use, enhancing grading efficiency and supporting sustainable agricultural practices.

The Effects of Magnetic and Gravitational Fields on Azolla Plant Growth

- Studied the effects of magnetic and gravitational fields on the growth of the Azolla plant. Experiments were conducted to examine its potential for cultivation and use as a fertilizer under various environmental conditions.
